Blood Typing Specimen Change

Creighton Medical Laboratories is pleased to announce that blood bank testing will now be done using the ID-Micro Typing System (ID-MTS). ID-MTS will allow the improvement of accuracy and consistency of testing. ID-MTS is also stable which will allow senior staff to review problem specimens as necessary. The transition to ID-MTS will require a change in specimen requirements. The live date for ID-MTS is January 15, 2007.

All Prenatal Profiles specimen requirements have changed from 1 EDTA Lavender and 1 Clot to 1 EDTA Lavender, 1 Clot Red and 1 EDTA Pink.

Accounts who have ordered Prenatal Profiles and Type and Screen tests in the past year will receive an automatic supply shipment of the pink tubes based on their monthly average volume. Start collecting specimens in the pink tubes as soon as you receive them and contact Michelle, CML Supplies, at 280-4387 to place an order for additional pink EDTA tubes.

Effective Date:	**January 15, 2007**	
Test Order:	Prenatal Panel	Blood Type and Antibody Screen
Test Number:	2025	1004
