

CREIGHTON MEDICAL LABORATORIES

Maternal SERUM Screen (Quad Screen)

To ensure the quality of Maternal SERUM Screen (Quad SCREEN) results, the laboratory EVALUATES calculated medians for each of the four analytes reported in the Quad screen on a quarterly basis.

Medians will be recalculated annually to assure they are appropriate for our patient population. Recalculation of the medians was ACCOMPLISHED effective February 8, 2006.

In addition, we request your assistance in performing outcome studies on your patients that had QUAD testing done. Comparing calculated risk assessment with actual outcome of the pregnancy is a valuable quality assurance tool. A laboratory representative will be contacting your staff to arrange a convenient and HIPAA compliant way for you to provide patient outcome data to us.

Please forward this to appropriate staff members within your facility. If you have any questions, please contact CML at (402) 280-4382.

Creighton Medical Laboratories is proud to be your partner in providing effective and timely health care.
